

A New Experience in Managed Outsourcing

Electricity, space and network are just part of your managed services equation. With Clearview Managed Services, we give you what matters most—the knowledge, processes and client care enterprise-level organizations should expect. And nowhere is this more evident than in our newest center in Waco, Texas.

Waco: A Logical Choice

To some, Waco might seem like an unusual place for a managed services center. To us, it makes good sense. With easy access from Dallas, Fort Worth, Houston, Austin and San Antonio—by air or car—we can keep our clients up and running with true data replication between cities. Not only do we have programs and protocols for data, but we can provide fixed and mobile work-space recovery in the event employees become displaced from their daily work environments.

We'd like to show you a better managed outsourcing experience. To learn more, visit www.clearviewfocus.com, email sales@cvglobal.com or call us at 214.219.2815.

Business Continuity and Disaster Recovery

The Waco Information Technology Gateway (ITG) is a purpose-built business continuity and disaster recovery data center. Its previous life as a nuclear fall-out shelter provides the physical security previously unmet in the commercially available data center market. While its logical and system security is multi-layered and redundant. And to support the extreme network demands of data replication, dark/lit fiber is available to all customers

More Than Just a Place to Rest Your Data

When you're a Clearview client, your business matters to us. With valuable recovery experiences associated with 911 and Hurricane Katrina, we felt compelled to turn what otherwise might be catastrophes to predictable, manageable scenarios. We don't just sell space, racks and cages, we bring business insights, personal service, and hundreds of collective years in managing IT to create positive, collaborative outcomes.

Separate and Better

The Waco ITG is located on a power grid separate from Texas' major cities, making it unaffected during brownouts and blackouts. It features:

- Dual transformer commercial power feeds
- Multi-carrier fiber from the Dallas Infomart
- Security biometrics
- Magnetic key cards
- DVR cameras
- 24X7 onsite personnel
- N+1 power, generators, UPS, PDU, CRACs
- 15 MW commercial power
- 200 watts per square foot
- 30,000 square feet space
- Outside 500-year flood plane
